EXPERTISE

For almost 60 years, our screw conveyors have been used in demanding applications for problem free, economical and safe transport of a wide range of materials.

We are well on track to become Europe's leading producer of screw conveyors; and we have already manufactured more than 7000 different screw conveyors. You will find our products all over the world in a large diversity of industries.

The dependability, the low maintenance costs and the possibility of transporting horizontally as well as diagonally and vertically are all essential parameters which combined makes us an important collaborator in many branches of industry.

» TECHNOLOGY

The spiral design without centre shaft gives a high capacity (up to 500 m³/h), and strength.

Also larger pieces can be handled – even sticky, threadlike materials can be transported without problem. Reliable handling of wood materials such as bark, wood chips, cutter shavings, sawdust and more

Our reliable products have few moving parts demanding a minimum of maintenance and are also energy efficient.

The screw conveyors are enclosed, which ensures a safe and dust free environment with a low noise level.

By using our V-system – you will be able to convey materials 25 meters vertically without reloading.

» SERVICE / INNOVATION

We customize the screw conveyor according to your wishes regarding capacity, length, material, installation, support legs and other requests. We supply all spare parts and deliver worldwide.

To secure the quality of our products we have all necessary competence in our company. We do everything from design to ready product in our own factory with our own staff.
